Calderwood, Henry, his Work on the Philosophy of the Infinite reviewed. *See* Insoluble Problem.
Canada, state of, under the government of Lord Metcalfe, 169.
Celibacy, extent of, as shewn by Census, 409.
Census, curiosities of, 401—sagacity, caution, and integrity required in dealing with figures, 401—increase in the effective and energetic classes, 405—increased comforts, 406—progress in education, occupations of the people, 407—numbers and relations of the sexes, 408—extent of celibacy and its probable causes, 409—progress in the arts of locomotion and transmission of intelligence, 411.
Chaucer, his place and function in the history of English verse, 487.
Chrzanowski, (Shanowski,) General, his estimate of the European armies, 325.
Continent, The, in 1854, 289—political parties in the educated society of Paris, 290—Orleanist-Fusionists, Legitimists, 291—Legitimist-Fusionists, 293—Republicans, 293—Parliamentarians, 294—Despairers, 295—classification as to religious profession, 297—division of parties in their opinions of the war, 299—effect of the war upon Louis Napoleon's fortunes, 301—effects of the want of an aristocracy in France upon her political condition, 302—and military power, 303—perfect structure of a French army, 304—political state of the provinces in France, 306—state of Germany, feelings of Hungary towards Austria, 308—feelings of Prussia in regard to the war, 310—political state of Austria, House of Hapsburg, 312—relations between Austria and Hungary, 315—Charles-Albert and the invasion of Lombardy, 319—effects of equality, 321—political gain and loss in the Venetian territories, 321—plans for Italy, 324—Continental armies, Austrians, Turks, 327—coherence of Russia, possibility of breaking it up, 328—reconstruction of Poland, 330—state of the French army, length of time required to make a soldier, 333—Greeks and Caucasians, 335—Louis Napoleon's foreign policy, 338—his defects as an administrator, 339—probable results of the war, 340.

Cooke, W. F., introduces the Electric Telegraph into England, 571—his controversy with Professor Wheatstone, 573.
Cousin, M., on the Philosophy of the Infinite, 116, *et seq.*
Cowper, William, Life and Poetry of, 225—are poetry and steam relished by the same age? 225—is an age prosaic in which so much poetry is written and so much read? 228—collected editions of the British poets, 230—Mr. Robert Bell's annotated edition, 230—controverted question of Cowper's malady, 236—his mother's death, 238—discipline at Dr. Pitman's school, with its effects, 238—training at Westminster, 240—effect of dissipation on his irritable constitution, 241—anticipated trial of fitness before the House of Lords, its effects, 243—damaging effect of the air of Olney, 245—his connexion with John Newton, 246—his labours as a "lay curate," 246—Lady Hesketh comes to his rescue, 248—removes to Weston, 249—progress of his malady and death, 251—character of his poetry, 253.
Cromwell the Protector's efforts for the deliverance of the Vaudois, 377.

Dick Bequest, account of, 63.
Diet and Dress, 505—important place they occupy in human thought, 505—curious origin of certain dishes and combinations, 506—origin of bottled beer, 508—component parts of breakfast, fish, 510—tea denounced in House of Commons, 511—breakfast parties as compared with all other parties, 511—luncheon, materials for dinner, 513—advantages of taking wine with another, 515—fish, white-bait dinners, 516—John Bull's addiction to beef-eating, 519—poultry and pastry, 521—digestive cheese, 522—after-dinner speech-making, 525—strange banquets, 525—habits and men, the "easy swell," 527—connexion between buttons and honesty, 529—the tail-coat and the round hat, 530—movement against hats, 531—the beard and moustache, 532—duty of attention to dress in women, 534—head-coverings on the back of the neck, 538—Bloomerism, draggling robes, 540—the feet and graceful movement, 541—dress should befit the age and condition of the wearer, 543.
Dissenters, admission of, into Oxford University, 418, 423, 443.
Doran, Dr., notice of his "Table Traits" and "Habits and Men," 505.
Dreams, theory of, 187.
Drunkenness, how to stop, 455—its fearful consequences, 456—remedies, early closing, 459—Sunday closing, 462—no wages to be paid in public-houses, 465—the licensing system, 467—licensing of coffee-houses, 470—the Maine Law, 471—auxiliary remedies, taste for reading, 474—amusements, 476—concerts, excursions, parks, 477—museums, 481—teetotalism, 482.

Education in Scotland, 57—Sir J. K. Shuttleworth's testimony as to its deficiency, 58—nature of the training required for the Scottish character, 61—account of the Dick Bequest, 63—difficulties arising from religious differences, 67—all good education must be religious, 68—is the parent or the schoolmaster to be the religious educator? 69—effect of Arnold's preaching on his boy-hearers, 70, *note*—Mr. Stow's training system, 71—religious character of masters, 72—pluralities, 75—retiring provisions, 77—normal training-schools, 79—necessity for private exertions without waiting for Government, 82—danger of delay, 83.
Electric telegraph, account of, 545—its history, 547—invented by C. M. of Renfrew in 1753, 548—inventions of Lesage, Lamond, Betancourt, and Ronalds, 550—voltaic electricity, applied by Sœmmering, 551—discoveries of Oersted, Ampere, Arago, Faraday, and Sturgeon, 552—velocity, power required, position of wires, 554—M. Siemens' and Dr. O'Shaughnessy's experiments, 555—Mr. Bain's electro-chemical telegraph, 558—Bakewell's autographic and Brett's printing telegraph, 561—needle and dial telegraphs, 564—Professor Morse the inventor of national telegraphs, 566—M. Steinhill's Bavarian telegraph, 568—English telegraphs, 570—controversy between W. F. Cooke and Professor Wheatstone, 573—Electric Telegraph Company, 577—time-balls, submarine telegraphs, 584—Dover to Calais, Holyhead to Howth, 585—uses in meteorology and in railway business, 588.
Electricity, human, 201.
Electro-biology, theory of, 207.
Ellis, John, great merit of his researches into the nature of corals, 6, 8.

Faber, George Stanley, notice of his History of the Vallenses, 384.
Finlay, George, *see* Byzantine Empire.
France, state of parties in, in 1854, 290, *see* Continent, the, in 1854.

German inroads on Oxford, 419, 449.
Germany, state of, in 1854, 303.
Gibbon, his character as a historian, 346.
Gilly, Dr., his efforts in behalf of the Waldenses, 379.
Gladstone, M., mutilates the Oxford Reform Bill, 426.
Gosse's works characterized, 2—quoted, 13, 30, 40, 44, 54.

Hamilton, Sir William, his doctrine that the Infinite cannot be known, controverted, 117, *et seq.*—on Oxford Reform, 416, 424.
Halliwell, James Orchard, notice of his "Reliquiae Antiquae," 485.
Harvey, Professor, notice of his "Sea-side Book," 2, 25.
Hastings, Lord, his career in India, 156.
Heywood, Mr., his efforts for admission of Dissenters into Oxford, 418, 443.
Holland, Sir Henry, on mental Physiology, electro-biology, &c., 179—slow progress of mental science, 180—great value of Sir H. Holland's researches, 183—influence of mental attention on bodily organs, 184—sleep a succession of states, theory of dreams, 187—dreams in the day, the brain a double organ, 189—double consciousness, direct and reverse impression, 190—phenomena exhibited in various states of the mind, 192—general observations necessarily suggested by these facts, 197—conclusion to which we are led by these facts, the pictures of memory painted on the retina, 198—human electricity, 201—mesmerism or animal magnetism, 202—hypnotism and electro-biology, discoveries of Dr. Braid, 205—how the facts are to be explained, 207—phrenology and phreno-mesmerism, 209—trance or human hybernation, Colonel Townshend's progress of dying, 210—magnetoscope, odometer, and divining-rod, 212—table-turning and table-talking, 216—spirit-rapping and spirit-writing, 217—apparitions, second-sight, and presentiment, 219—coincidences, 220—epidemic manias, 221—necessity for improved education, 221.
Horsman, Edward, speech of, on Oxford Reform, 419, 436.
Hungary, treatment of, by Austria, 313.
Hypnotism and Electro-biology, 205.

India, government of, from 1801 to 1837. *See* Kaye's Life of Lord Metcalfe.
Infinite, Philosophy of. *See* Insoluble Problem.
Insoluble Problem, The, 113—metaphysics and theology in Scotland, 115—Philosophy of the Infinite, statement of the question, 116—opposite conclusions of M. Cousin and Sir Wm. Hamilton, 116—remarks on the question by Mr. Morell, 118—conclusions sought to be established by Mr. Calderwood, 118—views of Cudworth, 120, *note*—Berkeley and Bishop Brown, 120—the two impassable roads out of the darkness, 123—the regions in which light may be found, 125—how Time illustrates the insoluble problem, 126—metaphysical character of Time, 129—is there divinity in time and space? 130—the phenomena of Causation, 131—causation and creation, 132—how they illustrate the problem, 135—Deity in causation, 137—nature and limits of theological knowledge, 139—a science of theology impossible, 141—how theology becomes inductive and practical, 143.
Italy, religion in. *See* Vaudois.

Jamaica, state of, on Metcalfe's appointment as Governor, 157.
Johnston, Dr., his zoological triumphs, 2, 21, 53.

Kaye's (John William) Life of Lord Metcalfe, 145—merit of the work, 145—early life and arrival in India, 146—state of Hindostan at the time, 147—character of Lord Wellesley, 148—Metcalfe's service under him, 149—assistantship at Delhi, 151—important and successful mission to Lahore, 152—Residency at Delhi, 154—his matured opinions on questions of our Indian policy, 156—residency at Hyderabad, 158—appointed a member of the Supreme Council, nature of that office, 160—his opinions on the vexed questions of our Indian administration, 162—Provisional Governor-general, liberator of the Indian Press, 165—returns to England, 166—appointed Governor of Jamaica, 167—his government of Canada, 169—reflections suggested by the career of Lord Metcalfe, necessity of a civil service, 172—official skill requires training, 174—Metcalfe's character, 176.
Krasinski, Count, his view of the consequences to Russia of defeat in the present war, 273—his opinion of the importance of restoring the Polish nationality, 279.

Landsborough, Dr., his Works on Natural History noticed, 2.
Lardner, Dionysius, notice of his Museum of Science and Art, 545.
Latin Christianity. *See* Milman.
Lombardy, invasion of, in 1848, 319.

Manin, Signor, his opinions on the state of the Continent, 319, *et seq.*
Memory, theory of, 198.
Menzies, Professor, review of his Report of the working of the Dick Bequest, 57.
Mesmerism, or animal magnetism, 202—Baron Reichenbach's theories, 204.
Metcalfe, (Charles Lord,) Life and Correspondence of. *See* Kaye.
Milman's History of Latin Christianity, 84—difficulty of the subject and defects in the author's plan, 85—the first ages or birth epoch, 86—Rome of Justin Martyr, 87—Rome in the days of Cyprian's correspondence, 88—birthplace of Latin Christianity, 89—preponderance of the Greek element, 90—Roman Christianity

becomes Latin, 91—the Old Latin religion and the New, 93—causes of the rise of the Papacy, 94—contrast between Greek and Roman administration of a See, 97—Zosimus and Leo the Great, 97—moral and religious life of the Latin Christians, 99—extreme virtues, deification of the saints, 101—Latin Christianity in its enterprise of conquest, 104—Augustine's mission to Britain contrasted with the Irish missions of the same period, 107—Germano-Latin Christianity, 109—criticism of Dr. Milman's work, 110.
Minto, Lord, his administration of India, 152.
Montague, Colonel George, his merits as a naturalist, 9.
Morland, Sir Samuel, his embassy to the Vaudois, and Report, 377.
Morse, Professor, invents National Telegraphs, 566.

Napoleon, Louis, effects of the war on his fortunes, 301—character of, as a Sovereign, 337.
Natural History, progress of, during two generations, 3—importance of, in an educational view, 11.
Naturalist, qualities physical and moral required in, 9.

Oxford Reform Bill, 413—the intervention of Parliament an important fact, 413—grievances, the removal of which was demanded, 415—Report of the Royal Commission, 416—Oxford degenerating into a mere public school, 418—inroad of German influence and literature, 419—the evil lies in the excess of Tutorism, and the remedy in the extension of the Professoriate, 420—recommendations of the Royal Commissioners, 422—ground taken by the advocates for the University, 424—deficiencies in the reform due to Mr. Gladstone, 426—the Ministerial Bill, 428—cry of violence to the wills of the founders, 430—Roman Catholic Foundations lapsed to the State, 431—the State the paramount trustee of every public trust, 433—progress of the Bill, Mr. Horsman's speech, 436—proper basis for the independence of Professors, 439—mischievous veto conferred by the Colleges, 441—admission of Dissenters, 443—the future of Oxford, 444—opinions of the Fathers amenable to investigation, 451.

Panslavonic Empire, prospects of, in Europe, 279.
Peach, Mr. Charles, the naturalist, account of, 27.
Phrenology and Phreno-mesmerism, 209.
Poland, reconstruction of, 279, 330.
Professoriate at Oxford, 416, *et seq.*
Prussia, feeling of parties in, in regard to the war, 301.
Pusey, Dr., opposes Oxford Reform, 425, 446.

Ritson's collection of Songs, 489, 495.
Roman Empire, Eastern. *See* Byzantine Empire.
Russia, progress and prospects of the war with, 255—tribes of which it is composed, possibility of breaking up its coherence, 328—probable result of the war with, 340.

Sea-shore, sea-weeds. *See* Shore.
Sexes, curiosities regarding the numbers and relations of the, 408.
Shore, wonders of the, 1—works on the subject, 2—rise of popular science, 3—Natural History, 3—Geology, 4—Zoophytology, 5—qualities required in a naturalist, 9—educational value of Natural History, 11—suitableness of Torbay as the haunt of the naturalist, 15—masses of dead molluscs, cockles, 17—Dr. Gosse's description, 18—riches of the low-water mark, actiniae, 22—progress of species, transmutation theory, 23—personal Creator, 25—account of Mr. Charles Peach, 27—the Holothurian Hygiène, 28—Madrepores, 30—antiquity of species, 33—repetition of forms, 35—variety of forms, 36—the ludicrous and hideous in nature, 37—Southey's description of a rockpool on the coast of Devonshire, 41—wonders of the sea bottom, 42—Mr. Gosse's account of dredging at Weymouth, 44—nature's sanatory officers, 50—reciprocal sanatory function of animals and plants, 53—adjustment of the relations between the animal and vegetable kingdoms, 53—the "Aquarium," 54—books recommended, 56.
Shuttleworth, Sir J. K., his Report on the Deficiency of Schools in Scotland, 58.
Siemens' experiments on telegraphs, 555.
Sleep, theory of, 187.
Songs, Old English, 485—narrative and descriptive poetry before Chaucer, 485—English genius not lyrical, 489—Canute a poet, 490—songs of the thirteenth century, 491—of the fourteenth, 493—literary gap from Chaucer to the Elizabethan era, 496—songs of the fifteenth century, 499.
Southey's description of a pool on the sea-shore, 41.
Spirit-rapping and spirit-writing, 217.
Steinhill, M., account of his Bavarian Telegraph, 568.

Table-turning and table-talking, 216.
Taylor, Dr. Cooke, estimate of his "Overthrow of the Roman Empire," 352.

Tea denounced as destructive in House of Commons, 511.
Teetotalism, 482.
Telegraph. *See* Electric Telegraph.
Tennent, Sir James Emerson, notice of his History of Modern Greece, 353.
Turton, Dr., author of "British Bivalves," 16, 20.
Tutors at Oxford, 416, *et seq.*

Usher, Archbishop, his labours for the persecuted Vaudois, 377.

Vaudois (The) and Religion in Italy, 376—the great massacre following the bloody order of Gastaldo, 376—Cromwell's Embassy, 377—Sir Samuel Morland's report, 377—other histories since his time, 379—theology of the Waldenses, 380—their persecution for heresy, 382—their Church order, 382—Peter Waldo, 383—their recent history and present condition, 384—their liberation under Napoleon, 385—oppression under Victor Emmanuel, 385—persecutions in the nineteenth century, 386—efforts of the Roman Church to extirpate them, 388—the Emancipation of 1848, 391—foreign benefactors, Count Waldburg-Truchsess, Dr. Gilly, Dr. Stewart, General Beckwith, 392—education of their pastors, 393—office of the Waldensian church in Italy, 394—the Italian party, or recent converts from Popery, 396—disputes about church order, 397—the late secession, 399.
Vaughan, Henry Halford, on Oxford Reform, 426, 449.
Voltaic electricity applied to telegraphs, 551.

Waldensian Church. *See* Vaudois.
War, progress and prospects of the, 255—unexpected weakness of Russia manifested, 257—other benefits of the war, alliance of Britain and France, 258—revelation of the power and vigour of Britain, 254—undisturbed commerce and no loans, 260—change in the relations between Austria and Russia, 262—gain to the cause of freedom from Austrian policy, 265—improvement in the terms now demanded, 266—what is to be done with the Crimea? 269—and Transcaucasia? 271—improved internal condition of Russia less to be dreaded than her barbarism, 273—peculiarities of Sclavonic ambition, 277—danger of the anti-Russianism of the Poles merging into Panslavism, 278—opportunity of reconstructing the map of Europe, 283.
Wellesley, Lord, character of his Indian administration, 148.
Wheatstone, Prof., his controversy with W. F. Cooke regarding electric telegraphs, 573.
Wright, Thomas, notice of his "Reliquiæ Antiquæ," 435.

Zoophytes, 5, *et seq.*

ERRATUM.

Page 355, line 2, *for* Strepsiades *read* Dicæopolis.

EDINBURGH: T. CONSTABLE, PRINTER TO HER MAJESTY.
